

LED-Sight „*Day&Nightfire*“

left: LED-Sight classic, right: LED-Sight "Day&Nightfire"

With the new **LED-Sight "Day&Nightfire"** we have completed our classic LED-Sight with a new feature: The bead sticks out nicely during daylight hours due to its light gathering red material and thus offers the best choice as a passive illuminated sight. In an environment with bad light conditions, simply switch on the LED and you can make optimal usage of your sight without depending on your surroundings.

Perfect for the active hunter and stalker, from dusk till dawn!

features:

- Simple exchange versus existing open sight with a number of sporting firearms like Blaser R93 / Sauer 202 / Mauser M03, and many more...
- With all other firearms: mounting via a protruding bolt (to be fitted by gunsmith if necessary).
- Battery lasts about 10-12 hours
- Sight is height adjustable
- Redundancy: to be used like any other ordinary sight at low battery
- Model ***Day&Nightfire***:
 - during daylight hours passive, light orange-red bead without LED usage
- Model ***Classic***:
 - no red light reflexes if an additional scope is used
