

The LED-Sight for Your Rifle

(Utility Model & Design pending)

left: normal sight, right: LED-Sight

*Quick aiming improves your snap-shooting ability. With our new invention, the **LED-Sight**, you have now the chance to aim independently from daylight with your open sights. Illuminated, fast and accurate, like you have never seen before...*

Try it yourself!

Details of the **LED-Sight**:

- Quick aiming with the open sights, even under extreme light conditions (dusk and dawn, dark vegetation).
- The sight is illuminated independently of daylight or any other light sources from its own LED.
- Redundancy when battery is empty: Aiming like a standard open sight
- No reflections inside your scope, like it happens with low powered scopes and fiber-optic-sights.
- Battery lasts about 10-15 hours
- Easy installation or exchange with a lot of different rifles, like the Blaser R93, Sauer 202, Mauser M03 and much more.
- With nearly all other guns: Installation with a threaded bolt.
- Height adjustable.
